Amharic OCR Extractor - User Guide

Welcome to the **Amharic OCR Extractor**! This application allows you to easily extract Amharic text from PDF documents and image files using advanced AI models. This guide will walk you through the core features and how to use them effectively.

1. Getting Started

When you open the application, you will be prompted to log in. Once logged in, you will see the home screen where you can start a new extraction or load a previously saved document from your library.

2. Uploading a File (PDF or Image)

1. On the home screen, locate the **Upload File** dropzone.
2. Click the area to browse your device, or drag and drop your file into the box.
   - **Supported File Types:** PDF documents (`.pdf`) and Image files (`.jpg` , `.png` , `.jpeg`).
3. Once the file is selected, the application will read its contents.
   - If a PDF is uploaded, the app will automatically convert its pages into images.
   - If an image is uploaded, it will be treated as a single-page document.

3. Extracting Amharic Text

After uploading, you are taken to the **Editor View**.

1. **Select Pages:** On the left sidebar, choose the starting and ending page numbers you want to extract text from.
2. **Quality Setting:** Select the desired extraction quality (Fast or High Quality).
3. **Extract:** Click the **Extract All Pages** button. The AI model will process each page, one after another, and extract the Amharic text, maintaining formatting where possible.
   - *Note: If a rate limit is reached, the application will pause and prompt you to wait a moment before continuing.*

4. Editing and Reviewing

1. Click on any extracted page in the main viewer to open the built-in **Text Editor**.
2. You can manually correct any OCR mistakes, adjust the layout, and fix text alignments.
3. If a specific page had poor extraction, click the **Regenerate** (refresh icon) button on that page's card to run the OCR process again for just that page.

5. Using the Floating AI Chat Assistant

Need help with translation, summarization, or formatting?

1. Click the **Chat Options** button (floating icon) in the bottom-right corner.
2. If you are editing a page, the AI chat will read the context of that page automatically.
3. You can ask it to:
   - "Correct typographical errors in this Amharic text."
   - "Summarize this page."
   - "Format this text into bullet points."

6. Saving to Library

To ensure you do not lose your work:

1. Click the **Save** button in the top navigation bar.
2. The document will be saved securely to your personal Library.
3. At any time, you can click **Library** from the top menu to re-open a previously saved document.

7. Exporting to PDF

Once you are satisfied with the extracted and corrected Amharic text:

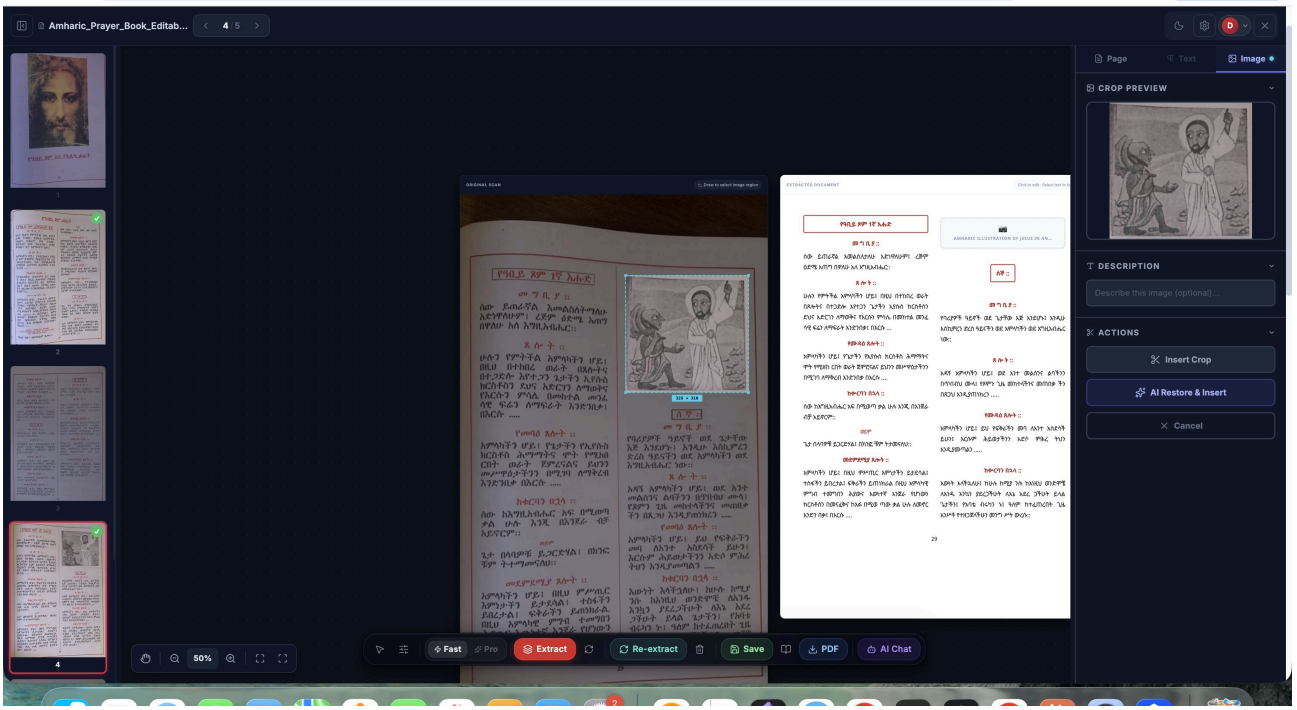
1. Click the **Download PDF** button in the top navigation bar.
2. The application will compile all your edited pages into a clean, formatted PDF document containing the Amharic text.
3. The file will be automatically downloaded to your device.

8. Extracting and Restoring Images

Important Note: By default, the AI engine prioritizes text extraction and does NOT automatically extract original photographs or illustrations (it may leave a placeholder instead).

To manually extract a photograph, chart, or illustration from the original document:

mage Extraction Feature

1. In the **Editor View**, look at the left-side panel showing your original scanned page.
2. Click and drag your mouse to **draw a selection box** around the exact image you want to extract.
3. A "Crop Preview" side-panel will open on the right, showing the selected image.
4. From the Actions menu in the right panel, you can choose:
    - **Insert Crop:** Directly inserts the snipped image into your document as-is.
    - **AI Restore & Insert:** Enhances the image quality—removing scan noise and sharpening details—before inserting it into the final document flow.


(Ensure you click inside the editable document where you want the cursor to be before inserting the image!)
